Summary

I am a dedicated website and system developer with a strong passion for creating clean, functional, and user-focused digital solutions. With experience in freelancing on creating websites, I enjoy turning ideas into fully working systems that are efficient, visually appealing, and easy to use. I continuously improve my skills, explore new technologies, and take pride in delivering high-quality work that helps clients and businesses grow online.

Experience

Freelance Web & System Developer

May 2024 – Current | Philippines

- Designed, developed, and maintained responsive websites for a small business cafe and personal projects, ensuring optimal user experience and functionality.
- Created a custom school web system to manage and handle enrollment, as well as advertising the school via the user interface.
- Collaborated with clients to understand project requirements, provided technical guidance, and delivered solutions within deadlines (e.g: biometric attendance system).
- Utilized HTML, CSS, Javascript, TypeScript, React, and Python for web and backend development, continuously learning new technologies to enhance project quality.
- Delivered projects that improved online presence and streamlined school processes
- Built interactive web applications to automate tasks and improve client workflow efficiency
- Implemented security and data protection measures for web systems handling sensitive and client information.

Projects

Fingerprint Attendance with Control System (F.A.C.S)

Technologies: Python, SQLite, QtDesigner, Arduino

- Developed a biometric-based attendance system for an Engineering firm to manage employee attendance offline and online.
- Integrated hardware fingerprint module with a software application for administrators.
- Key features include offline attendance support, data sync on reconnection, admin controls, and manual override.
- Enabled accurate logging of employee time-ins and time-outs, ensuring secure and efficient attendance management.

Secure Entry, Notification, and Tracking System (SeNT)

Technologies: Python (Flask), FaceNet, MTCNN, OpenCV, Supabase, Vite + React

- Built an integrated school security system with automated facial recognition attendance, real-time alerts, and parent notifications.
- Admin dashboard allows managing student profiles, exporting attendance logs, and sending emergency notifications.
- Raspberry Pi client captures student images and syncs with Flask backend for attendance logging and notifications.

CodeSpire – Game for Programmers

Technologies: Python, Pygame

- Developed a game similar to Space Invaders targeted for programmers.
- Designed interactive levels, gameplay mechanics, and scoring systems to engage users and promote programming concepts in a fun way.

STI Chatbot

Technologies: TypeScript, Vite, TailwindCSS, Google Gemini API

- A single-page chatbot built with an STI-themed interface and powered by the Google Gemini API.
- Provides real-time, AI-driven responses for students and users in a simple and responsive layout.
- Runs directly in the browser or with minimal backend setup using npm, utilizing environment variables such as GEMINI_API_KEY.
- Showcases integration of modern AI APIs into web applications for interactive learning and engagement.

Note: Additional projects and client work cannot be displayed here due to client confidentiality and discretion.

Skills

- **Frontend Development:** HTML, CSS, JavaScript, TypeScript, React, Tailwind CSS, Vite, Next.js
- **Backend Development:** Python, Flask, FastAPI, REST APIs, Supabase
- **Database Management:** Supabase (PostgreSQL), SQL, Authentication, Firebase
- **AI & Computer Vision:** TensorFlow, FaceNet, MTCNN, OpenCV, NumPy, scikit-learn
- **System Development:** Web-based business systems, school management systems, booking systems, dashboards, and automation tools
- **UI/UX Design:** Responsive interfaces, component-based design, accessibility, and modern user experiences
- **Linux & Development Environment:** Linux Mint, Bash, Git, GitHub, Neovim (LazyVim), terminal-based workflows
- **Deployment & DevOps:** Render, environment configuration, Git-based deployment, project maintenance
- **Problem Solving & Debugging:** Performance optimization, debugging, troubleshooting, and code refactoring

- **Software Architecture:** Modular application design, reusable components, API integration, and maintainable codebases
- **Client Collaboration:** Requirements gathering, project planning, communication, and delivering freelance solutions

Education

College - Bachelors of Science in Information Technology Specialized in Web and Mobile Development

Far Eastern University - Tech, Manila, Philippines

1st Year: 2026 – 2027

Expected Graduation: 2030

Senior High School – Mobile App and Web Development Strand

STI College MUNOZ-Edsa, Quezon City, Philippines

1st Year: 2024 – 2025

2nd Year: 2025 – 2026
